Reduce Costs
Remove inefficient manual tasks, ensure correct calculation of normal and overtime.

Improve Accuracy
Through on-line timesheet entry by employees or supervisors and on-line approval.

Reduce Time
Significantly reduce the time it takes to process pays.

TimeAlert

Specifically designed to integrate to Chris21 HR and Payroll

your solution to the time sheet nightmare

Chris[21] and TimeAlert automatic integration

'TimeAlert' key differentiator

Most other timesheet systems operate independently of your HR and Payroll system. This means the Payroll Office constantly keeping 'another' system up to date and synchronised with the HR system.

The result-

The Payroll Office performing 'non value add' administration.
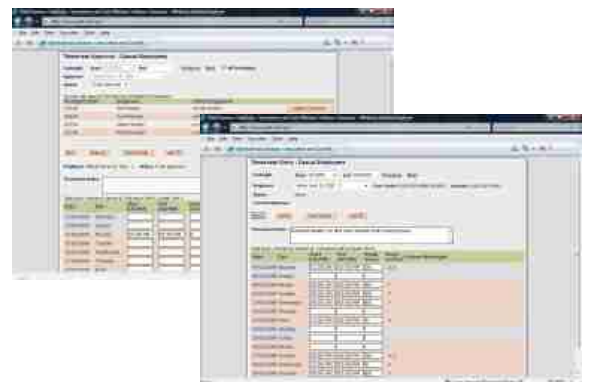

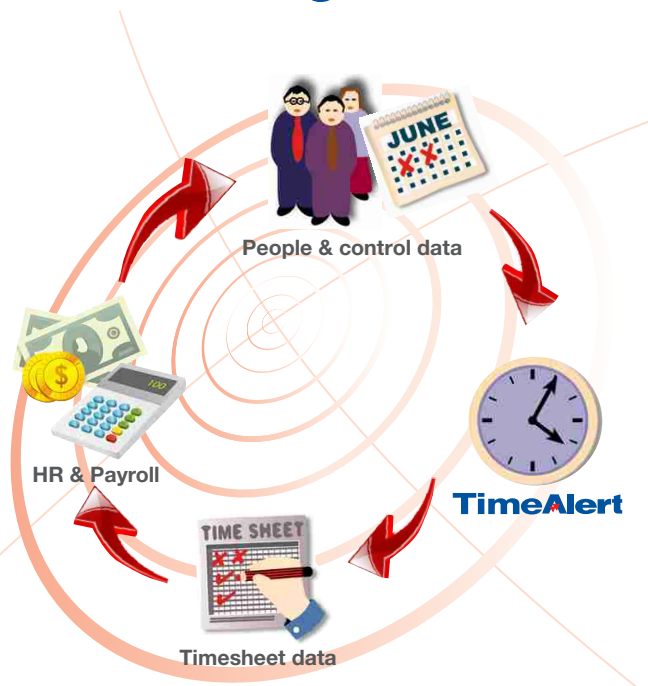

TimeAlert is different!

TimeAlert is controlled by the Chris[21] HR system. Data stored in the Chris[21] system is used by TimeAlert to dynamically manage the web timesheet entry and approval system. Controls such as timesheet access permissions, timesheet approval permissions, calendars and more, are managed by employee and other data stored within the Chris[21] HR system.

What does this mean for you?

No additional administration overhead of 'another' new system. Once TimeAlert is setup there is no further ongoing maintenance required.

Of course there are facilities in the TimeAlert system that the Payroll Office will want to use however these empower and assist them to perform their tasks efficiently and effectively.
